PROFESSIONAL SUMMARY

Software Developer with 4+ years of experience building scalable enterprise systems using C#, .NET, React, and distributed architectures. Strong track record modernizing legacy platforms, optimizing performance, and supporting production systems in high-availability environments.

TECHNICAL SKILLS

- Languages: C#, Python, JavaScript
- Frameworks: .NET, React, MVC, Entity Framework
- Web & APIs: REST APIs, Open API, Swagger, jQuery
- Databases: PostgreSQL, MSSQL, MongoDB, Redis
- DevOps & Tools: Git, Jenkins, SonarQube, WhiteSource, SumoLogic
- Platforms: Linux, Windows

PROFESSIONAL EXPERIENCE

Software Developer II — SMS Assist LLC, Chicago (Feb 2022 – Nov 2022)

- Contributed to the modernization of a legacy monolithic application by designing and implementing C#/.NET microservices, refactoring tightly coupled modules into independently deployable services. This improved system modularity and enabled more stable release cycles.
- Resolved high-volume transactional query latency by refactoring inefficient LINQ logic, optimizing ORM mappings, introducing targeted PostgreSQL indexing strategies, and leveraging prepared statements. These changes significantly improved production data access performance without altering business logic.
- Developed solutions for caching results on Redis, to prevent repeated database lookups. This assisted in developing file upload and processing functionality for clients improving throughput and reducing additional costly client attempts made in error.
- Performed deployment of updated modules using Jenkins. Strengthened engineering quality by expanding unit and integration test coverage and embedding automated test validation into CI pipelines, increasing code coverage and reducing regression defects during deployments.
- Improved code health and security posture by addressing SonarQube findings, enforcing quality gates, and remediating vulnerable dependencies through WhiteSource, reducing technical debt and strengthening compliance standards.
- Supported production stability during on-call rotations by diagnosing incidents using SumoLogic log analysis and collaborating cross-functionally to restore services quickly, minimizing downtime impact.
- Wrote performant front-end code in React, as well as updating and maintaining legacy code in knockoutJS.
- Created demos on short notice for client onboarding to show potential ideas for fulfilling their specific needs. Under this responsibility, I worked with a small team on implementing rapidly evolving client requirements into working MVP demos.

Software Developer — Ab Ovo North America, Boston (Apr 2019 – Jan 2022)

- Played a key role in a multi-year enterprise rail cargo planning implementation for a major Canadian client, evolving from core developer to hybrid Technical Consultant and code owner. This transition helped increase US/Canada collaboration and improved responsiveness during later project phases.

Phase 1: Developed EDI interfaces, modeled logistics network components, created KPIs and constraints, and enhanced GUI elements to support accurate operational planning.

Phase 2: Designed internal data retrieval APIs and integrated third-party REST services, enabling seamless cross-system data exchange critical to operational planning workflows; authored communication framework documentation; built a load and performance testing framework from scratch to streamline validation and identify memory bottlenecks.

Phase 3: Transitioned into a hybrid Technical Consultant and code owner role, resolving client-side performance issues, designing scalable interface enhancements, and implementing dataset archiving functionality to improve large-scale planning system responsiveness.

- Designed dataset partitioning and archiving strategies to address growing data volumes, improving scalability and accelerating data load/offload processes across planning cycles.
- Mentored junior developers, authored technical documentation, and established debugging best practices, reducing ramp-up time and increasing team productivity.

Student System Administrator — University of Houston–Clear Lake (Jun 2016 – Aug 2017)

- Maintained university-hosted support platforms, databases, LDAP authentication systems, and NFS access controls, ensuring system availability for faculty and students.
- Assisted in RAID crash recovery by restoring systems from backups and supporting database recovery procedures, minimizing data loss and service disruption.

EDUCATION

- Master of Science in Data Analytics — McDaniel College (2023–2025)
- Master of Science in Computer Science — University of Houston–Clear Lake (Dec 2017)
- Bachelor of Technology in Information and Communication Technology — DA-IICT, Gujarat, India (Jun 2015)

CERTIFICATIONS

- Certified Scrum Product Owner (CSPO)
- Quintiq Specialist Level 1/Quintiq Technical Consultant Level 1
